OPEN-FILE REPORT
This report has not been edited for conformity with

U.S. Geological Survey editorial standards or

stratigraphic nomenclature.

EXPLANATION

OVERBURDEN ISOPACH-Showing thickness of over-

BOUNDARY OF COAL 5 FEET OR MORE THICK— Drawn along the outcrop of coal bed and/or the inferred contact between burned and unburned coal and/or the 5-foot coal isopach. Arrows point toward area of coal

burden, in feet, from the surface to the top of the coal

bed. The 100-foot isopach is omitted where it is too close

to a mining-ratio contour for map readability. Isopach

MINING-RATIO CONTOUR—Number indicates cubic yards of overburden per ton of recoverable coal by surface-mining methods. Contours shown only in areas

suitable for surface mining within the stripping limit.

To convert yds³/ton to m³/metric ton, multiply yds³/ton by

To convert feet to meters, multiply feet by 0.3048.

______200 —

interval 100 feet (30.5 m).

5 feet or more thick.
